**Notes**

Bluejay has a number of highly prospective licences at various stages of development in Greenland and Finland. The Company is dual listed on the London AIM market and Frankfurt Stock Exchange.

The Company is currently focussed on advancing the Pituffik Project in Greenland, an area that has only recently revealed its mineral potential following changes in the climate. The project, which comprises three main target areas along an >80km coastline, has identified that the asset is the highest grade ilmenite project in the world with an Inferred resource of 23.6Mt at 8.8% ilmenite (in situ) for the total area tested. This includes a high-grade zone equal to 7.9Mt at 14.2% ilmenite (in situ) at Moriusaq which is the focus of the feasibility and production studies that are currently underway. The Inferred resource covers just 17% of the deposit, demonstrating the upside potential available through exploration.

The Company's strategy is focused on the production of a bulk

sample "proof of concept" from the Pituffik Project in 2017 with the aim of ultimately generating cash flow to create a company capable of self-funding exploration of future acquisitions. The Company also plans to test the larger exploration target of 90Mt to 130Mt at an in-situ grade of between 6.3% and 8.4% ilmenite during 2017.

Bluejay also holds a 100% interest in a portfolio of copper, zinc and nickel projects in Finland. This multi-commodity portfolio remains a strategic asset of importance and has been restructured to be cost-sustainable whilst determining the best plan for future development.
