About Bluejay Mining plc

Bluejay is listed on the London AIM market, Frankfurt Stock Exchange and its shares also trade on the Pink Market in the US. The Company is advancing multiple highly prospective projects in Greenland and Finland. Bluejay offers both portfolio commodity diversification focused on base, energy and precious metals in Tier 1 jurisdictions.

Bluejay's most advanced project, through its 100% owned subsidiary Dundas Titanium A/S in Northwest Greenland, is the Dundas Ilmenite Project, which is fully permitted with a JORC Mineral Resource of 117Mt at 6.1% ilmenite and a maiden offshore Exploration Target of between 300Mt and 530Mt of ilmenite at an average expected grade range of 0.4 - 4.8% ilmenite in-situ. Bluejay has agreed a Master Distribution Agreement with a major Asian conglomerate for up-to 340ktpa of its anticipated 440ktpa annual output. The Company has signed on a major European bank to head the financing syndicate for Dundas. Bluejay's strategy is focused on finalising and securing financing ahead of commencing commercial production at Dundas in order to create a company capable of self-funding exploration on its current and future projects.

Bluejay, through its wholly owned subsidiary Disko Exploration Ltd., has signed a definitive Joint Venture Agreement with KoBold Metals to guide and fund exploration for new deposits rich in the critical materials required for the green, future and electrification energy transition (the Disko-Nuussuaq nickel-copper-cobalt-PGE Project). The JV has completed intensive analysis and interpretation of the extensive geochemical, geophysical, and geological data collected during the previous

exploration campaigns. Leveraging KoBold's proprietary artificial intelligence (AI) and machine learning (ML) platforms, this comprehensive analysis has resulted in the identification of seven initial priority targets within the project area. These seven priority targets exhibit spatial characteristics indicative of potential deposits on a scale comparable to renowned mining operations such as Norilsk, Voisey's Bay, or Jinchuan. The JV is now planning a focused ground-loop electromagnetic survey to refine and prioritize each locality appropriately.

Disko Exploration Ltd holds two additional projects in Greenland - the 692 sq. km Kangerluarsuk zinc-lead-silver project, where historical work has recovered grades of up to 45.4% zinc, 9.3% lead and 596 g/t silver; and the 920 sq. km Thunderstone project which has the potential to host large-scale base metal and gold deposits.

In Finland, Bluejay currently holds three large scale multi-metal projects through its wholly owned subsidiary FinnAust Mining Finland Oy. The Company has identified multiple drill ready targets at the Enonkoski nickel-copper-cobalt project in East Finland. Bluejay's Hammaslahti copper-zinc-gold-silver project hosts high-grade VMS mineralisation and extensions of historical ore lodes have been proven. The drill ready Outokumpu copper-nickel-cobalt-zinc-gold-silver project is located in a prolific geological belt that hosts several high-grade former mines. In August 2023, Bluejay successfully divested its Black Schist Projects in Finland to Metals One plc in a transaction worth £4.125 million (Bluejay currently owns c. 29% of the issued ordinary share capital of AIM listed Metals One plc).
